Below is a short description of some of the important terms used to describe this product throughout this brochure. Throughout the brochure any terms written with initial capitals will be explained here.

Certificate – this investment is a Certificate. A Certificate is effectively an IOU between the issuer of the Certificate (in this case BNP Paribas Issuance B.V.) and an investor. The Issuer agrees to pay the investor a return, if applicable, at maturity as described in the product documentation of the Certificate. If the Issuer and Guarantor default and are unable to repay the investor at maturity, the investor could lose some or all of their investment.

Certificates can be listed on a stock exchange and traded like a share, meaning the investor can buy and sell the Certificate during the investment term.

Enhanced Performance – the Index Performance multiplied by the Participation Level.

Final Index Level – the official closing level of the Index on the Final Observation Date.

Final Observation Date – the date (1st June 2027) on which the Final Index Level is recorded.

First Fixed Payment Date – the date (19 June 2023) prior to maturity on which you will receive the first part of the proceeds that are due from the Certificate (a quarter of your Initial Investment⁽¹⁾ plus the Guaranteed First Fixed Income Return⁽¹⁾).

Guaranteed First Fixed Income Return⁽¹⁾ – the return (applied to a quarter of your Initial Investment⁽¹⁾ and set indicatively at 13.5%) which you will receive on the First Fixed Payment Date, regardless of Index Level. This return is indicative. It will be fixed on the Trade Date but will not be lower than 12%.

Guaranteed Second Fixed Income Return⁽¹⁾ – the return (applied to a quarter of your Initial Investment⁽¹⁾ and set indicatively at 30%) which you will receive on the Second Fixed Payment Date, regardless of Index Level. This return is indicative. It will be fixed on the Trade Date but will not be lower than 27%.

Guarantor – BNP Paribas S.A. (Société Anonyme).

Index – the underlying index is BNP Paribas World Climate Care RC8 AR Index (Bloomberg code: BNPIEWC8 Index).

Index Level – the official closing level of the Index on the relevant date, expressed as a percentage of the Initial Index Level.

Index Performance – the percentage change from the Initial Index Level to the Final Index Level. This performance will be used to calculate whether or not you shall receive any additional return on the Certificate on the Maturity Date and, if applicable, the size of that return.

Initial Index Level – the official closing level of the Index on the Strike Date.

Initial Investment⁽¹⁾ – the total amount invested into this Certificate, before deduction of any fees.

Issuer – BNP Paribas Issuance B.V.

Maturity Date – the date (17 June 2027) on which you will receive the remaining part of the proceeds that are due from the Certificate (the remaining half of your Initial Investment⁽¹⁾, plus a potential enhanced return linked to the Index Performance).

Max Drawdown – a portfolio risk indicator. It measures the gap between the highest and the lowest values of an underlying on a given period of time. It is used to assess the relative riskiness of one investment strategy versus another.

Participation Level – the multiple of the Index Performance payable on the Maturity Date, applied to the remaining half of your Initial Investment⁽¹⁾. This level is indicatively 150%. The definitive terms of the product are dependent on the prevailing market conditions in the credit, equity and currency markets. If those market conditions change materially over the subscription period, BNP Paribas Issuance B.V. reserves the right to cancel the issuance and reimburse the investments collected.

Second Fixed Payment Date – the date (17 June 2025) prior to maturity on which you will receive the second part of the proceeds that are due from the Certificate (a quarter of your Initial Investment⁽¹⁾ plus the Guaranteed Second Fixed Income Return⁽¹⁾).

Sharpe Ratio – a measure for calculating risk-adjusted return. It indicates the return earned in excess of the risk-free rate per unit of risk. The higher the ratio, the better the risk-adjusted return.

Strike Date – the date (1st June 2022) on which the Initial Index Level is recorded.

Trade Date – the date (31st May 2022) on which the Participation Level will be set.

ZAR – South African Rand.

¹⁾ There is a risk of partial or total loss of your Initial Investment and any potential return in the case of bankruptcy or payment default by the Issuer and Guarantor. Please see pages 11-12 for credit ratings and other financial information. For more information on the risks associated with an investment in the Certificate, please see page 10.

The BNP Paribas World Climate Care RC8 AR Index: a 3-step selection process

1

Filters on companies

First, companies are selected from the Vigeo Eiris World Initial Universe (approximately 2,700 companies) according to ESG compliant and energy transition strategy filters:

- **Exclusion of companies** with a V.E. ESG score in the lowest 25% in their sector or below 30/100, or involved in armament, nuclear, tobacco, pornography or in critical controversies;
- **Exclusion of companies** with a BNP Paribas Asset Management ESG Score of 9 or 10 (10 being the worst score);
- Among intense emitters only those with the best **energy transition score** in their sector, as assessed by V.E., can be selected.

2

Constraints on portfolios

The remaining companies are finally used to determine the composition of the Index and should then expect some constraints such as a strong financial outlook, being liquid enough, being diversified by sector and equally weighted.

3

Final selection

The final selection must meet three requirements : a maximum volatility of alpha 5%, a carbon footprint 50% lower than the benchmark and maximize the V.E. score.

Risk control mechanism

The Index incorporates a risk control mechanism to target a volatility* of 8%. The mechanism will dynamically adjust exposure to the components of the Index in order to keep an exposure proportional to the target volatility of 8%. If the volatility level is higher than 8% the Index will allocate into bonds by creating a portfolio composed of equities and bonds.

*What is Volatility?

Volatility is a measure of price movements, or of the amount by which the daily return of the Index moves from its average daily return over a set period of time. It is an indicator of the level of risk. High volatility equates to high risk.

HOW THE INVESTMENT RETURN IS CALCULATED?

All illustrative returns are shown before the deduction of any applicable tax. The numbers used in this example are for illustration of the mechanics of the product only. These figures are not an indication of future performance. The calculations on this page uses the indicative Guaranteed First Fixed Income Return, the indicative Guaranteed Second Fixed Income Return and the indicative Participation Level, as explained on page 3.

Calculation of the Enhanced Performance

- The Index Performance is calculated as the percentage change from the Initial Index Level to the Final Index Level.
- The Enhanced Performance is expected to be 150% (1.5 times) of the Index Performance. This is indicative and will be set on the Trade Date. The Enhanced Performance will be applied to 50% of your Initial Investment⁽¹⁾.

Calculation of the investment return

On the First Fixed Payment date, after one year, you will receive:

- 25% of your Initial Investment⁽¹⁾; plus
- A Guaranteed First Fixed Income Return⁽¹⁾ indicatively estimated at 13.5% on a quarter of your Initial Investment⁽¹⁾.

On the Second Fixed Payment date, after three years, you will receive:

- 25% of your Initial Investment⁽¹⁾; plus
- A Guaranteed Second Fixed Income Return⁽¹⁾ indicatively estimated at 30% on a quarter of your Initial Investment⁽¹⁾.

On the Maturity Date, after five years, you will receive:

- The remaining 50% of your Initial Investment⁽¹⁾; plus
- A potential enhanced return on that remaining 50% of your Initial Investment⁽¹⁾, if the Index Performance is positive.

Initial Investment⁽¹⁾ protection

- On the First Fixed Payment Date, regardless of the Index Level, you will receive a quarter of your Initial Investment⁽¹⁾ back as well as the Guaranteed First Fixed Income Return⁽¹⁾, and thus avoid being exposed to negative market performance.
- On the Second Fixed Payment Date, regardless of the Index Level, you will receive a quarter of your Initial Investment⁽¹⁾ back as well as the Guaranteed Second Fixed Income Return⁽¹⁾, and thus avoid being exposed to negative market performance.
- On the Maturity Date, even if the Final Index Level is below the Initial Index Level, you will receive the remaining half of your Initial Investment⁽¹⁾ back, and thus avoid being exposed to negative market performance.
- Your Initial Investment⁽¹⁾ is protected at maturity only. In the case of early withdrawal, you will receive back the current market value of your investment, which may be significantly less than your Initial Investment⁽¹⁾.

What are the risks when investing in BNP Paribas Tandem Plus Certificate (ZAR) Series 7?

In addition to the risks and drawbacks described on page 6, you should consider the following:

■ How does the currency affect the investment?

There is no currency risk in this investment as it is denominated in ZAR, meaning that the value of the South African Rand compared to other currencies has no effect on investment returns or on the Initial Investment⁽¹⁾.

■ What if BNP Paribas S.A. (Société Anonyme) defaults?

When you invest in BNP Paribas Tandem Plus Certificate (ZAR) Series 7, you take on the credit risk of BNP Paribas S.A. (Société Anonyme). This is the risk that BNP Paribas S.A. (Société Anonyme) will not be able to pay the Initial Investment⁽¹⁾ (plus any additional return) at the end of the investment term. Investors should note that BNP Paribas S.A. (Société Anonyme) acting as Guarantor is licensed as a credit institution in France and as such is subject to EU legislation, including the Bank Recovery and Resolution regime. EU Authorities have the power to amend the key terms of the Guarantee, to reduce the amounts payable by the Guarantor under the terms of the Guarantee (including a reduction to zero) and convert the amounts due under the Guarantee into shares or other securities, which may be worth significantly less than the amount due to you under the Certificates at expiry. **Therefore, there is a risk that you may lose part or all of your investment.**

■ How does market risk affect the investment?

The market value of the investment during the five year investment term will change not only according to the performance of the Index but also according to other market parameters such as market volatility, interest rates and the credit rating of BNP Paribas Issuance B.V. and BNP Paribas S.A. This means that while you can withdraw your investment before the Maturity Date you will then receive the market value of your investment which may be less than the Initial Investment⁽¹⁾.

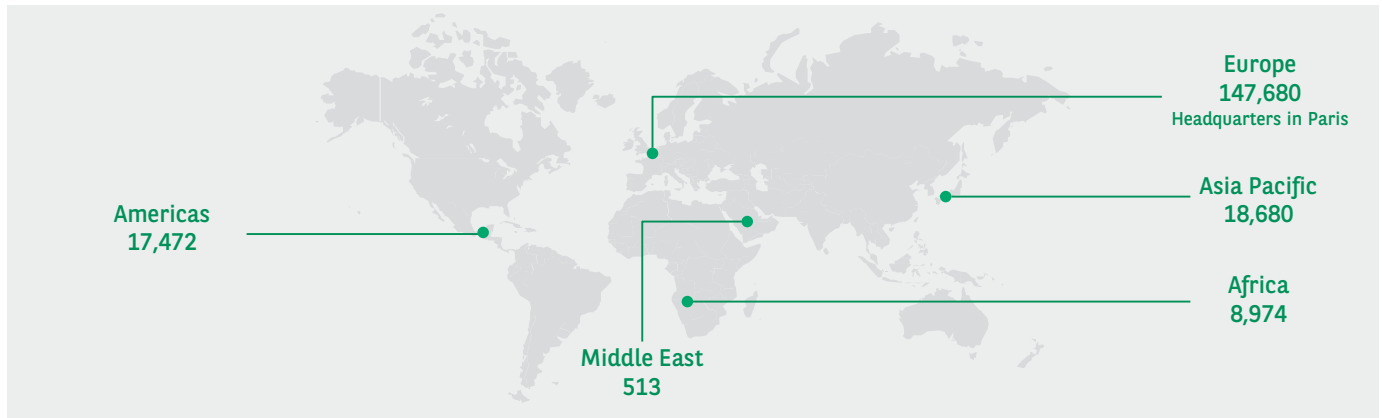

■ Adjustment events

Whilst every effort will be made to maintain the conditions and variables of the Certificates, in certain circumstances, BNP Paribas Arbitrage S.N.C. is entitled to make adjustments. Examples of these circumstances include: changes in laws or regulations which affect the ability of BNP Paribas Arbitrage S.N.C. to execute and manage its hedging arrangements in respect of the Certificate or a disruption to trading in the stock market or financial markets or a change in ownership of BNP Paribas Arbitrage S.N.C. The adjustments BNP Paribas Arbitrage S.N.C. may be entitled to make include adjusting the Initial Index Level and the Final Index Level, postponement of the dates on which the levels are observed, substitution of the underlying assets and early redemption of the Certificates and altering or delaying the payment of amounts due to be paid under the Certificates.

1) *There is a risk of partial or total loss of your Initial Investment and any potential return in the case of bankruptcy or payment default by the Issuer and Guarantor.
